Energizer® Premium AGM.

Provides the power you need for advanced start-stop technology.

The *Energizer®* Premium AGM batteries are the perfect solution for vehicles featuring advanced start-stop technology with regenerative breaking and additional fuel-saving technologies.

Thanks to our glass mat technology, which prevents acid stratification, AGM batteries age markedly more slowly. They have a considerably longer service life and are extremely vibration-resistant as well as 100% spill and leak-proof. A great deal of attention was focused on making this battery safe: thanks to the safety valve on the VRLA lid with integral flame arrestors, there is no risk of excess pressure inside the battery, as gases that are generated can always escape in a controlled manner. It goes without saying that *Energizer®* Premium AGM batteries are completely maintenance-free throughout their service life. Expensive and time-consuming servicing is therefore a thing of the past, as is worrying that the battery may lack the required energy.

By choosing the Premium AGM by *Energizer®*, you are opting for a state-of-the-art product that has earned the trust of leading vehicle manufacturers, who use it to equip their most demanding vehicles, such as the latest 'micro hybrid' start-stop vehicles.

Good reasons to choose the *Energizer®* Premium AGM.

The best solution for vehicles with an extended start-stop system as well as for vehicles with the highest energy demand.

- Advanced start-stop applications
- Latest OE technology
- Extreme life and cycling stability
- 100% spill and leak-proof
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer® Premium EFB.

Gives you the perfect start into the entrance level of start-stop.

If you own a vehicle with the latest start-stop technology you know what is good for the environment. By reducing CO₂ emissions and fuel consumption when the engine is switched off while stopped at traffic lights, you are driving the green way. To power a vehicle with entry level start-stop technology, your car needs to have the right battery: *Energizer® Premium EFB!*

Energizer® Premium EFB batteries are ideal for use in vehicles with standard start-stop functionality, ensuring that electrical devices continue to be reliably supplied with power while the engine is switched off and that the engine can be restarted in seconds when it's time to pull away. They not only boast cyclic stability that's twice that of conventional batteries, but also offer sustained performance levels even when discharged.

Benefits of *Energizer® Premium EFB* batteries at a glance.

This battery is the right choice for vehicles with an entry-level start-stop system.

- Entry-level start-stop applications
- OE technology
- High life and cycling stability
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer®

Energizer® car batteries.

Full power everytime.

Good reasons to choose.

The car is the epitome of individual mobility, regardless of whether it's a small car, an estate car or a luxury saloon, for everyday use or as a collector's pride and joy. It's not the type of car that counts, but the independence that it provides us with. The *Energizer®* car battery provides reliable starting power thanks to its streamlined range of batteries for every application – even in foreign and vintage cars.

With its sophisticated construction and reliable Calcium-tin-lead alloy, which provides extra cold start performance even at the lowest temperatures, the *Energizer®* Premium battery is the very best choice for modern vehicles with lots of electronic devices.

It also has a considerably longer service life. With performance values well over the norm, the *Energizer®* Plus was designed with the demands of today's mid-range vehicles in mind and, with its wide range of batteries, ensures excellent market coverage and maximum safety. The safety lid and single point venting in particular guarantee a worry-free drive. For older vehicles with fewer electronic devices, the *Energizer®* is the perfect choice.

Energizer® offers every driver an innovative, tried-and-tested battery which always boasts top performance, reliability and the spirit of a world-renowned premium brand.

Energizer® Premium

The name says it all: an ideal combination of premium quality and premium performance. A battery to fulfil the highest demands in performance, service life and reliability in mid-range vehicles and SUVs, for example. *Energizer®* Premium: your very own statement of independence.

- For conventional vehicles with high energy demands
- Extremely long service life
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer® Plus

Starting power that never ceases to impress: with the Energizer® Plus, you have the comfort of knowing you'll always have enough starting power under the bonnet, even in the most demanding situations.

- For conventional vehicles with standard energy demands
- Long service life
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

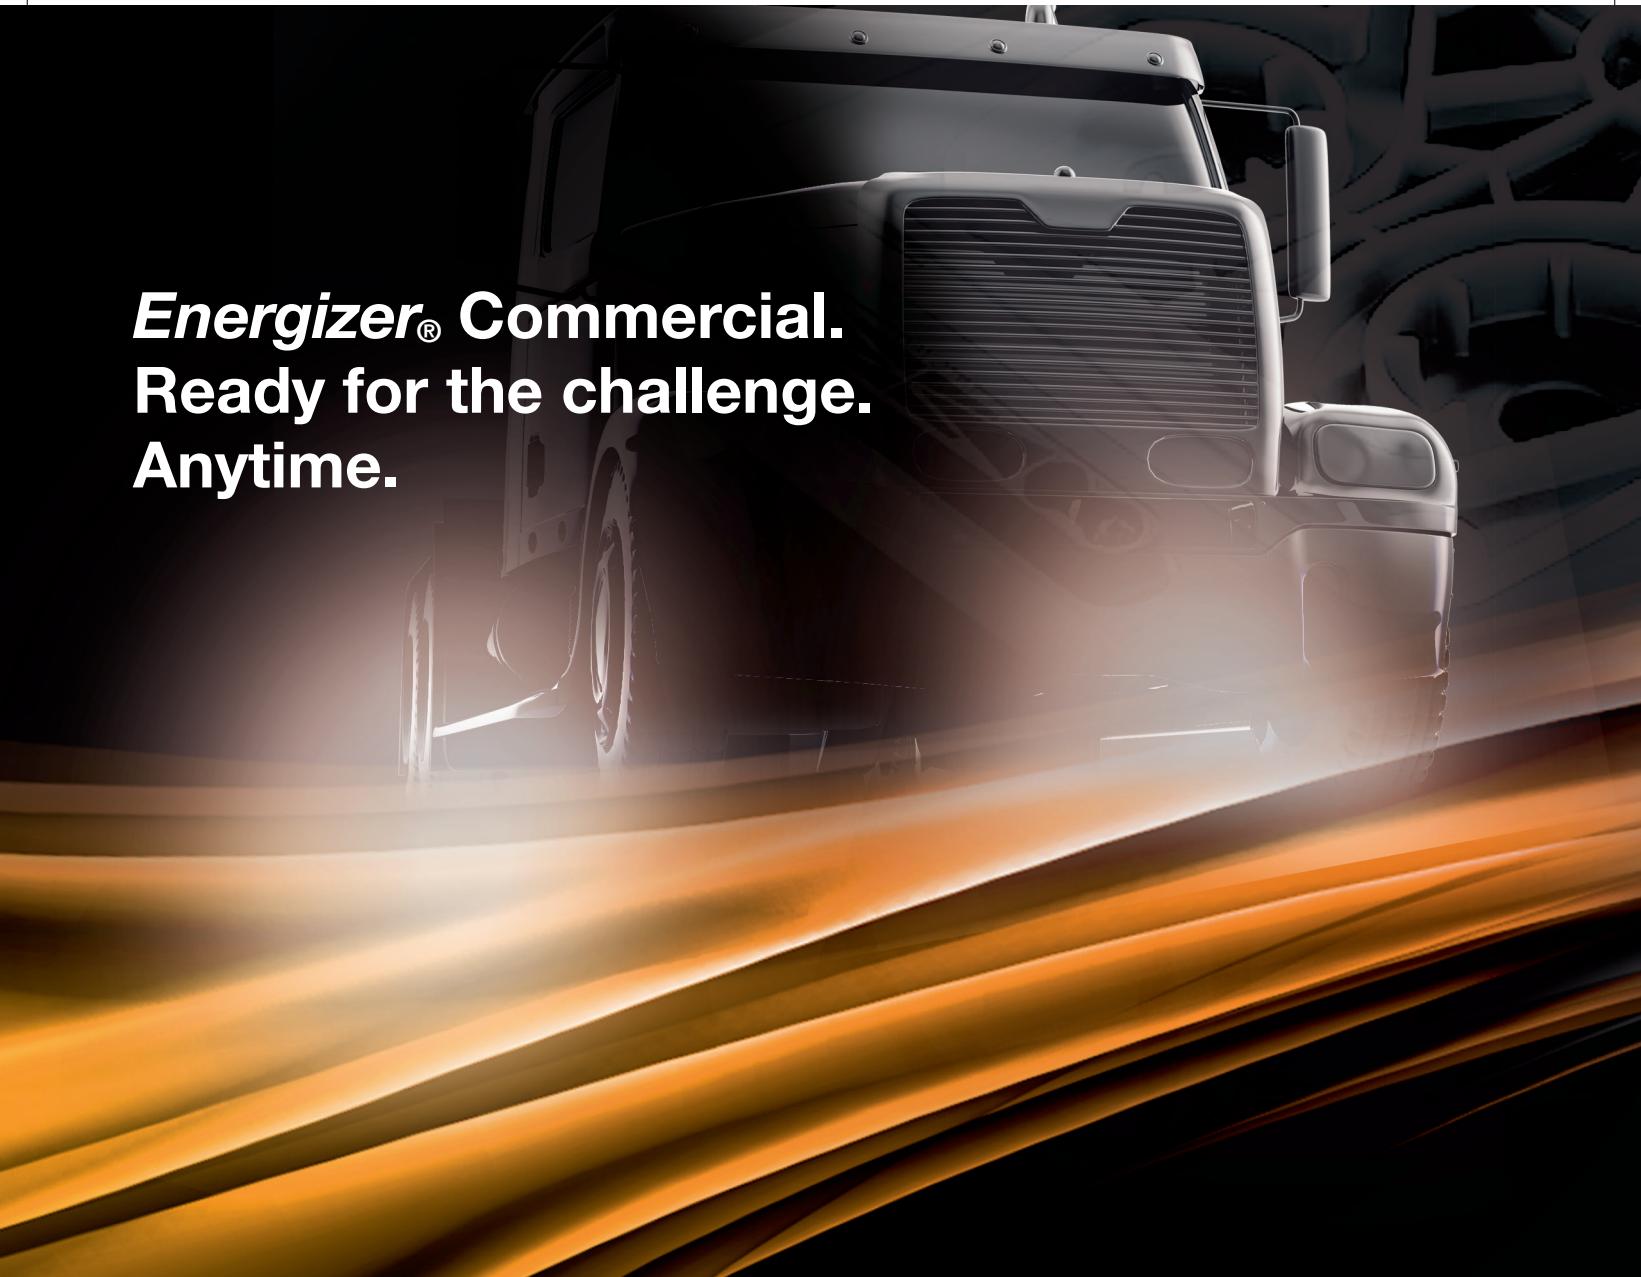

Energizer®

A whole lot more than your conventional battery: the Energizer® is a reliable and safe partner for vehicles with fewer electronic devices and boasts performance values well over the norm.

- For vehicles built before 2000
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer®

Energizer® Commercial. Ready for the challenge. Anytime.

Regardless of whether it's for short or long-distance applications, or for buses or construction vehicles, you need maximum reliability to ensure they're always ready to go. The *Energizer®* Commercial vehicle batteries have what it takes to keep every commercial vehicle – and every business – up and running. Two product ranges offer the right choice for all areas of application, for every level of power and every cycle performance.

The new *Energizer®* Commercial Premium truck batteries offer impressive advantages over conventional batteries for commercial vehicles: they are completely maintenance-free and come filled and charged. High-cost filling and

up to three services a year are now a thing of the past. That not only means savings in materials and mechanics' fees, but also prevents unnecessary downtime. What's more, our engineers invest a lot of time and energy in safety and, in addition to the already legendary, robust casings, the new batteries boast safety components such as the Labyrinth lid, special caps and integral flame arrestors. Exceptional vibration and cycle resistance provide this battery with a long service life, so professionals can depend on their energy supply 100%.

Energizer® truck batteries offer maximum power. For every start, in every weather and in every application.

Main Applications

Range	Coach	Truck without sleeper cab	Delivery vehicle with tail-lift	Delivery vehicle	Construction vehicle	Agricultural vehicle
<i>Energizer®</i> Commercial Premium SHD	✓	✓				
<i>Energizer®</i> Commercial Premium HD			✓			
<i>Energizer®</i> Commercial				✓	✓	✓

Energizer® Commercial Premium

These new, maintenance-free, ultra powerful batteries are available in SHD and HD models and provide real advantages in everyday use:

- SHD: Tour bus, distribution traffic and heavy commercial vehicles without hoteling function
- HD: City delivery with tail lift
- High cycle life
- Optimum starting power, maximum cold start performance
- Maintenance-free due to labyrinth lid technology
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer® Commercial

The perfect battery with high performance for almost any application. Featuring tried and tested technology and simple installation, it fulfils the basic requirements in the range of *Energizer®* batteries for commercial vehicles.

- City delivery, construction, agriculture
- Long cycle life
- Optimum starting power, reliable cold start performance
- Stamped Grid Technology for more cranking power and corrosion resistance than other grid technologies to consistently deliver superior power
- Made in Europe

Energizer®

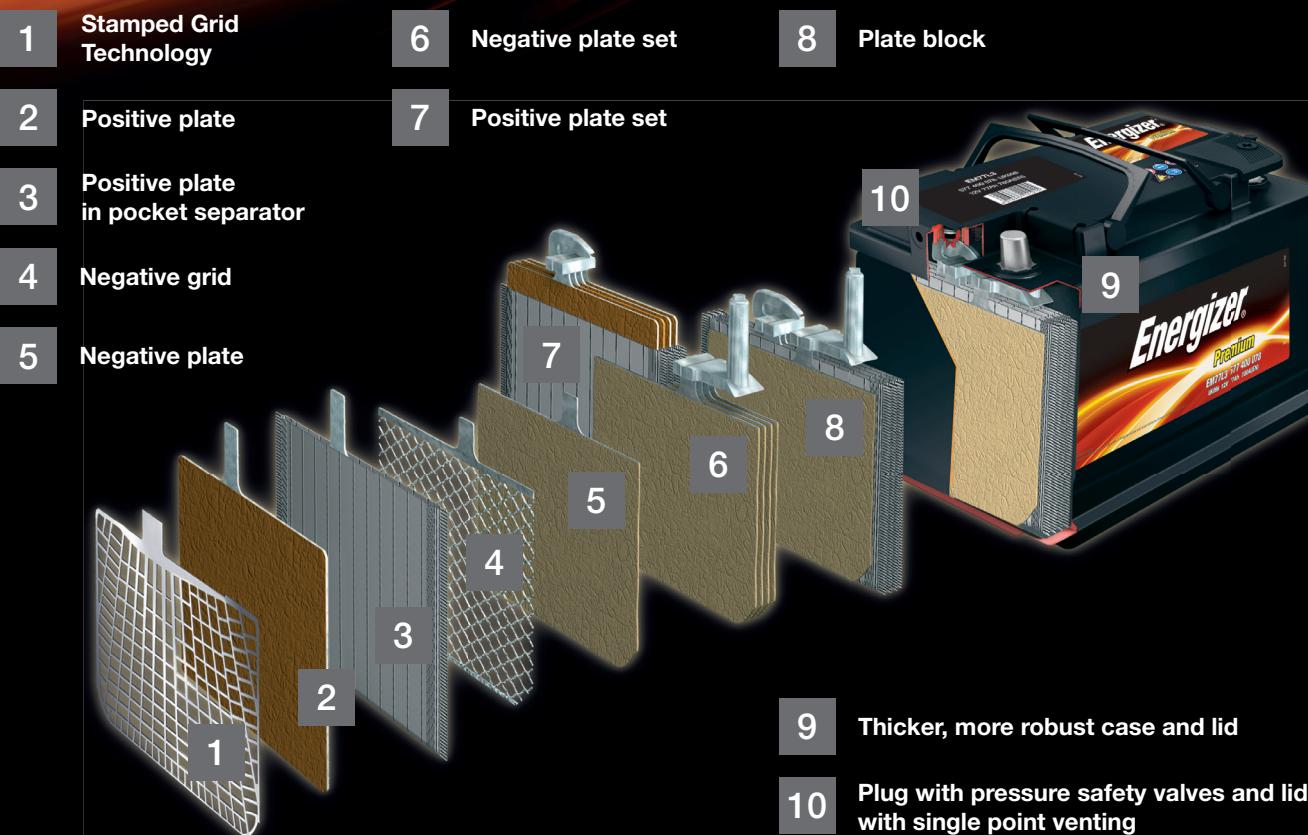

Stamped Grid Technology – for the power you need.

You expect full power every time. And we provide the power you need – thanks to our Stamped Grid Technology.

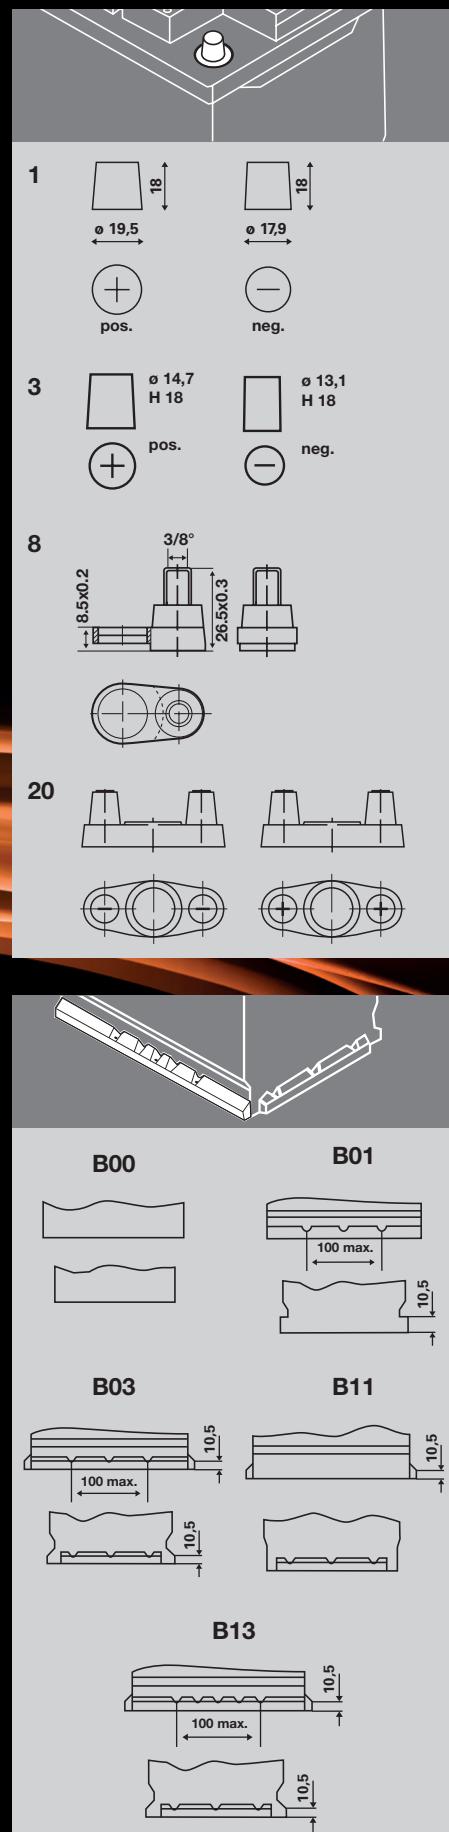

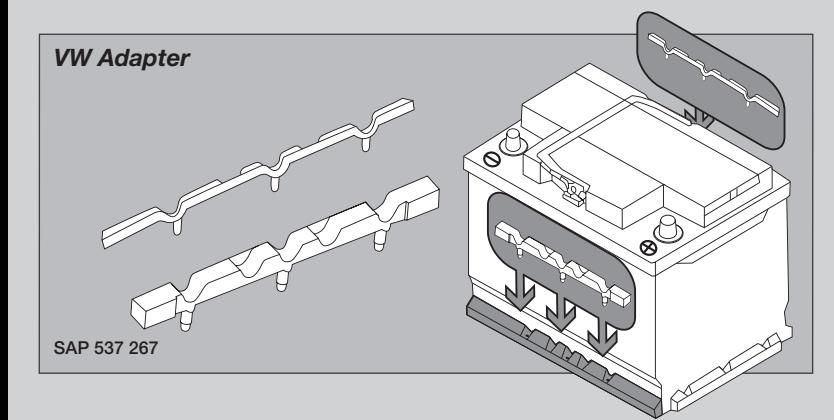

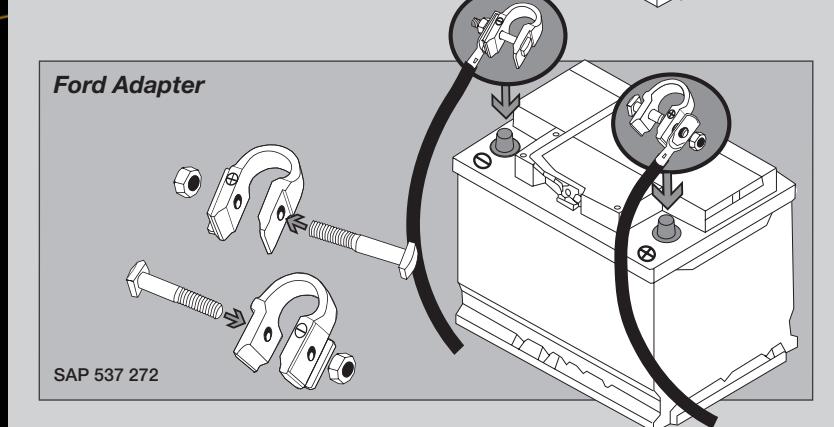

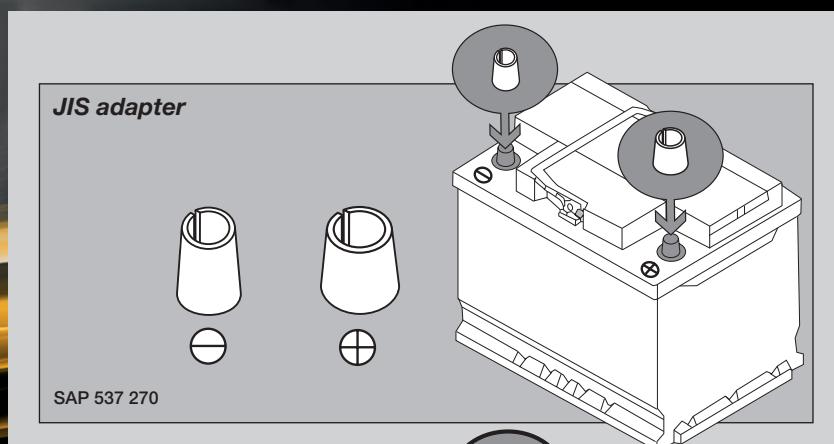

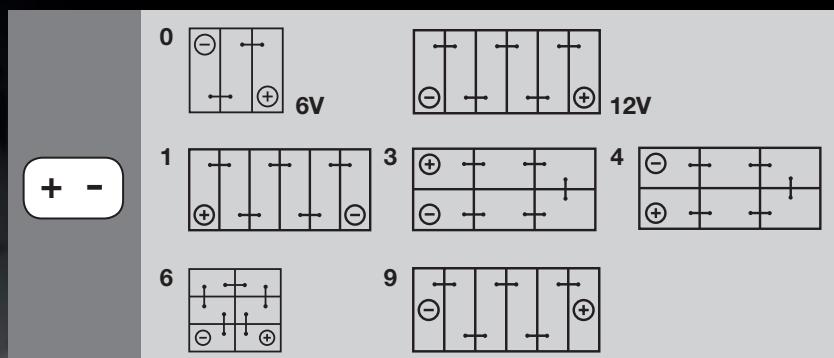

This unique technology consistently delivers superior performance. The technology produces a grid that is more corrosion-resistant and delivers more cranking power than other grid designs.

But there is even more: a precise manufacturing process to have exact patterns for consistent results when ever needed. Unlike conventional battery grids the Stamped Grid Technology forms from a single sheet to have a precisely rolled and stamped metal.

Furthermore the manufacturing process uses less energy than other grid manufacturing methods and fewer greenhouse gas emissions are release – for a cleaner, safer environment.

Due to the wide variety of vehicles on the roads and the many variations in individual models, Energizer® does not accept responsibility for incorrect battery fitting. Responsibility for battery fitting lies with the installer at all times. If in doubt, please check the vehicle manufacturer's handbook.
